## DETAILED ACTION

### *Response to Arguments*

1. Applicant's arguments filed 18 April 2008 regarding the rejection of claims 57-62 & 79 under 35 USC§102 were persuasive and the rejection has been dropped. The rejection of claims 1-20, 25, 57-58 under 35 USC§103 have been fully considered but they are not persuasive. The rejection to these claims has been maintained.
2. The indicated allowability of claims 22-24, 26-27 is withdrawn.
3. Claims 28-48, 53-56, 63-80 are allowed.

### *Claim Rejections - 35 USC § 103*

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-20, 22-27 rejected under 35 U.S.C. 103(a) as being unpatentable over Boerma (US Pat. 4,696,911) in view of Maskav et al and EP-246,366.

Applicant has amended the claim to include a limitation previously deemed allowable. Upon further consideration, "wherein producing the catalyst composition includes hydrogenating the fat component such that the catalyst is dispersed in a hydrogenated fat matrix" does not render the instant invention unobvious over the prior art.

In EP'366, the nickel-based catalyst is contained in hardened coconut oil, which as one of ordinary skill in the art knows, is another way of saying, "hydrogenated coconut oil". While the actual steps of hydrogenating the coconut oil are not given, the result is the same, a nickel-based catalyst in a hydrogenated fat matrix.

As stated in the previous office action, the instant invention is still rendered obvious unpatentable over Boerma (US Pat.4,696,911) in view of Maskaev et al and EP-246,366.

6. The following rejection is deemed proper.

### ***Double Patenting***

7. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

8. Claim 1 provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of copending Application No. 10/567,727. Although the conflicting claims are not identical, they are not patentably distinct from each other because the reaction parameter overlap pertaining to the catalyst preparation step and both result in the same hydrogenated feedstock

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
